Subject: 35 Ave Site

Stephen,

Sorry for the delay in getting this information to you. Below are our split samples that came back with higher PAH levels than what the EPA's testing showed.

One is CV1013 collected at 3428 27th Avenue North with a BaP of 1.620 The second one was for CV0251 from 3321 32 St North with a BaP of 1.330 but a large total BapTEQ that puts them well over the 1.5. The whole lab sheet is attached with that test result being the last one in that batch.

Let me know if you have any questions.

All the best,

Brian
